

**Internal Professional Standards for Clinicians Working
in SaTH Urgent Care Pathways – Updated Version
During Covid-19 Pandemic**

1. **Expected Timelines**: ED operate a senior rapid assessment system to check all plans made for ED patients have had senior input. The ideal timelines for urgent pathway patients are:

Ambulance offloading and Initial Assessment (ED):	within 15 minutes
Navigation and COVID cohorting decision (ED):	within 15 minutes
Time to first clinician (ED):	within 60 minutes
Time to senior plan made and documented (ED):	within 90 minutes
Time to speciality referral (if indicated) - ED:	within 100 minutes
Time to speciality assessment (in assessment area if possible):	within 30 minutes of referral or within total 2 hours
Time for speciality decision to admit:	within 30 minutes from assessment
Time to leave ED (ED & specialities):	within 3 ½ hours

A referral to speciality needs to be made by an ED clinician ST1 level equivalent or above.

2. **Disputes**: A referral is a request for help from a colleague – the default answer is “yes”. A referral cannot be conditional on test results. Refusals and disputes about patient ownership are dangerous and will not be tolerated at SATH. Any disputes about patient ownership mandates an immediate conversation consultant to speciality consultant on-call. Should this not settle the dispute, the escalation route is:
- resolution CD to CD between specialities
 - resolution by a Care group MD (phone)
 - resolution by Deputy MD / MD (phone)
3. **Simplicity**: ED referrals are made for assessment, a short stay admission or a definitive admission – this is part of the clinical discussion between clinicians. Speciality doctors must not insist on numerous tests that do not contribute to the referral or admission decision. Referrals cannot be “handed back” to ED. The last person to see the patient has the most up to date information for discharge, admission or onward referral. The correct place for specialists to see these patients is determined by the ED COVID Navigator’s decision.
4. **Direct referrals**: Patients arriving in ED in possession of a current GP referral letter, or referred to a speciality by phone by their GP, or referred by the CCC or a community referrer will be directly referred to a speciality from the outset – this referral can be made

by the ED clinical navigator, by an ED middle grade or consultant or by the ED nurse in charge. Cohorting and location decision as in 3.

Example: DVT with a GP letter – can go directly to SDEC.

Exception: Conditions that can **ONLY** be treated in ED – e.g. shoulder dislocation; also patients who are arriving by ambulance from a GP who need resuscitation area – these will be seen by the speciality teams with help and input from ED in Resus.

5. **Returners:** Patients discharged within 24 hours from speciality care and presenting with the same clinical problem will be automatically referred back to the clinical speciality they were discharged from. Principles 2, 3 and 4 apply.
6. **Sick / COVID patients:** Speciality referrals who are very sick, in the Resus area, or high risk for COVID, will need to be reviewed by a suitably senior speciality doctor in the appropriate area (e.g. COVID HIGH RISK zone) prior to transfer. The timelines in 1 apply.
7. **Ward transfers:** Nursing handover can take place between two qualified nurses; or in selected cases between HCA and nurse. A nursing handover can take place via phone or on arrival on the ward. Patients who have been referred from ED to speciality will be moved to a ward or AMU bed within 30 minutes of that bed being declared. Wards which have empty beds should be ready to accept an admission within 30 minutes at any time. At a minimum, patients will have the combined ED / AMU clerking completed and their current known medication prescribed on a drug chart and a VTE assessment completed. A concise clinician to clinician handover will take place on referral and when a patient has had an ED senior review but not a speciality senior review, the on call speciality middle grade will be contacted with the details of the patient and their ward destination (see SOP). Handovers can still take place during meal times, but this should be kept to a minimum. The site office operates a medical tracking system to ensure no medical admission is 'lost'.
8. **Side Rooms:** Generally, SATH's IPCC guidance for side rooms applies (other pathogens). During the pandemic, a high or medium risk patient will be placed in an appropriate cohorting area – this cannot always and does not have to be a side room, provided they are placed on an appropriate cohort ward under the right speciality with the right PPE policy in place on that ward. The final arbiter of side room disputes are the site offices / CSMs: (RSH Tel.1203 / Bleep 886 – PRH Tel.:4027 Bleep 109)
9. **Speciality Pathways:** During COVID, many specialities (Gynaecology, Stroke, Paediatrics, Trauma & Orthopaedics) are operating 'transfer to assess' pathways to segregate admission areas. Please familiarize yourself with these and adhere to these pathways in order to keep ED transfer time to a minimum. These pathways were designed to minimize the number of contacts with clinicians and other staff. They also help getting the patients quicker to the right speciality.
10. **Sepsis:** Clinicians at SATH commit to timely completion of sepsis assessment and treatment. We regard completion of the sepsis assessment pathway within 15 minutes and completion of the sepsis bundle and review by an ST3 (or equivalent) or above within 60 minutes (<https://www.rcem.ac.uk/docs/Sepsis/Sepsis%20Toolkit.pdf>) as our prime responsibility. To not do so would mean putting lives at risk.

Executive Team:

Louise Barnett	<i>CEO</i>	
Maggie Bayley	<i>Interim Chief Nurse</i>	Approved electronically 13.05.2020
Nigel Lee	<i>Chief Operating Officer</i>	Approved electronically 12.05.2020
Dr Arne Rose	<i>Executive Medical Director</i>	

Senior Medical Leadership Team:

Bridget Barrowclough	<i>Guardian of Safer Working Hours</i>	Approved electronically 12.05.2020
Mark Cheetham	<i>Deputy Medical Director</i>	Approved electronically 12.05.2020
Tony Fox	<i>Deputy Medical Director for Transformation</i>	Approved electronically 12.05.2020
David Green	<i>Medical Appraisal Lead</i>	
Sam Hooper	<i>Associate to the Medical Director</i>	Approved electronically 12.05.2020
John Jones	<i>Deputy Medical Director</i>	Approved electronically 12.05.2020
Saskia Jones-Perrot	<i>USC Assistant Medical Director</i>	Approved electronically 14.05.2020
Steve McKew	<i>Clinical Support Services Medical Director</i>	Approved electronically 14.05.2020
Jenni Rowlands	<i>Foundation Programme Director Postgraduate Medical Education</i>	Approved electronically 13.05.2020
Koottalai Srinivasan	<i>Associate Medical Director (Undergraduate)</i>	Approved electronically 12.05.2020
Andrew Tapp	<i>Associate Medical Director</i>	
Martyn Underwood	<i>W&C Medical Director</i>	Approved electronically 12.05.2020
