

## DRAFT Anti-coagulation and head injuries

Step 1: Calculate risk of delayed intracerebral bleeding

Risk of delayed intracerebral bleeding in a patient on a DOAC

Amnesia -14.07%

Vomiting -9.84%

Loss of Consciousness - 10.48%

Headache- 5.64%

Step 2: Calculate CHA2DS2-VASc score

Age <65 = 0, 65-74 = 1, >74 = 2

Sex Female = 1, Male = 0

CHF history No = 0, Yes = 1

Hypertensive history No = 0, Yes = 1

Stroke/TIA/VTE history No = 0, Yes = 1

Vascular disease history No = 0, Yes = 1

Diabetes No = 0, Yes = 1

CHA2DS2-VASc score and risk of CVA/TIA in next 12 months

0	0.2%
1	0.6%
2	2.2%
3	3.2%
4	4.8%
5	7.2%
6	9.7%
7	11.2%
8	10.8%
9	12.2%

Step 3: Discuss with patient pros and cons of stopping DOAC for 72 hours

Step 4: Document in notes
